

ASSIGNMENT-AR/VR

The Tilting Earth using **A-Frame** and **WebXR** concepts, build a realistic, rotating model of the Earth

CLOSE-UP image

Image showing the tilting

I did the titling and spinning separately. First I tilted the globe with a-entity in 23 degrees and then I rotated the globe with a-sphere. A-entity acts as a parent class and a-sphere acts as child class. If I did the rotation and tilt in a-sphere, it won't work the way we want to be.
